

AeroPath OS Master Guide

The Ultimate Operating System for Education Consultancies

Section A: The Business Plan & Value Proposition

Target Market

Education consulting agencies handling high-volume international student applications. These agencies typically process hundreds of documents per week, leading to administrative bottlenecks.

The Core Problem

The manual document verification black hole. Consultants waste hundreds of hours manually reading transcripts, calculating GPAs, and cross-referencing them against constantly changing university requirements matrices.

The AeroPath Solution

An AI-powered OS that extracts data from Honors transcripts and passports, cross-references it against university matrices, and auto-generates visa workflows. Utilizing Google's Gemini Flash AI, it completely removes the manual reading phase from student onboarding.

SaaS Pricing Model

- **Core CRM Tier (\$99/mo):** Basic pipeline management, student portal, and document vault.
- **AI Automation Tier (\$299/mo):** Includes AI OCR data extraction, automated university eligibility matrix matching, and advanced financial ledger tracking.

Section B: The Sales Pitch (How to Hook the Customer)

The "Aha" Moment

Guide the sales rep to show the "**Automated OCR to Eligibility**" feature during the demo. Upload a complex *Bachelor of Science (Honors)* transcript and watch the CRM instantly extract the exact GPA and immediately filter the eligible partner universities based on real-time matrix rules.

Overcoming Objections

Objection: "We already use Excel, it works fine."

Rebuttal: "Excel is great for lists, but it doesn't track pending commissions automatically. Our Financial Dashboard integrates your application pipeline directly with your ledger. You'll never lose track of a \$5,000 commission again because an application stage was forgotten."

Section C: Agency Operating Manual

1. White-Label Setup

Step-by-step on how the agency customizes the CRM:

- Navigate to **Settings > Branding**.
- Upload the agency logo (it securely stores in the Supabase `logos` bucket).
- Select the primary brand color. The UI's "Deep Carbon" theme automatically adjusts its accents using `var(--tenant-primary)`.

2. The Morning Briefing

How consultants should use the daily task dispatcher:

- Open the Command Palette (Cmd + K) and type "My Tasks".
- Review all stalled applications in the Pipeline. The system automatically flags applications stuck in "Applied" for over 14 days.

3. Student Onboarding

How the agency invites students to the branded portal:

- Click "Add Student" and send an email invite via Resend integration.
- The student logs into their secure portal, uploads their Passport and IELTS scorecard.
- The AI OCR parses the documents automatically, notifying the consultant when the file is verified.
